

### Requirements

---

For the training, all participants need a PC containing the following software:

- EB Assist ADTF 2.X (version 2.9.0 or newer)
- EB Assist ADTF Display Toolbox 1.6.0 or newer
- EB Assist ADTF Device Toolbox 2.3.0 or newer

Recommendation for installation:

- Use the same platform version (win32, win64, linux) for EB Assist ADTF and the toolboxes
- Choose toolboxes installers that support the version of the used EB Assist ADTF or an older version
- Information about platform and supported EB Assist ADTF version is provided in the name of the installer. Toolboxes that support an older EB Assist ADTF version can also be used with a newer EB Assist ADTF version.
- Start ADTF once before installing the toolboxes
- Let the installer install the toolboxes into the ADTF addons directory

### Getting EB Assist ADTF

---

The common way to get the EB Assist ADTF software is to download it from EB Command (<https://command.elektrobit.com>). If you don't have access yet, EB will provide you the necessary account. You also need a valid EB Assist ADTF developer license for the duration of the training. If you don't have a valid license, EB will provide the required license upfront. Please check with your supervisor whether this is the way for you to obtain the software and the license, or whether there is a company specific way.
