EB Assist

Supporting automated driving development

State-of-the-art hardware and software products to successfully develop, test, visualize, validate, and build automated driving functions and systems.

Highlights

EB Assist CAR Box

- ▶ High-performant and reliable automotive-grade PC systems for testing and validation, data-logging, replaying, and simulation of real and virtual driving scenes

EB Assist bus tools

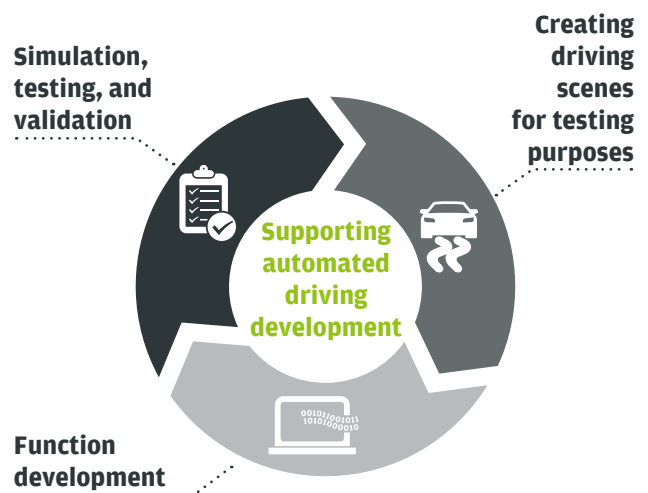

- ▶ Modular I/O slot cards and I/O interface modules used for highly precise data-logging and replaying

EB Assist ADTF

- ▶ Framework for the development, testing, and validation of automated driving systems with a wide range of toolboxes to extend system functionality

EB Assist Busmirror

- ▶ Tool for testing ECU software during the implementation stage, both on hardware and on PC

EB Assist comprises a comprehensive offering from a leader in embedded software and driver assistance development that covers major areas of automated driving development leading OEMs and Tier 1s across the world benefit from.

Benefits

- ▶ In-house hardware and firmware development enables a fast and flexible realization of your requirements
- ▶ Based on industry standards and therefore suited to fulfill the high demands when it comes to building flawless automated driving functions
- ▶ Single sourcing with one contact point in case of issues helps you save time and money
- ▶ Perfectly interlocking products that are high-performant and ready to use right from the start
- ▶ Dedicated trainings, professional consulting, and experienced support with short response times help you in achieving your goals
- ▶ Profound engineering services meet even your most exceptional needs
