# 1. Tutorial: Creating a horizontal progress bar

## TIP

### Default window layout

All instructions and screenshots use the default window layout. If you want to follow the instructions, we recommend to set the EB GUIDE Studio or EB GUIDE Monitor window to default layout by selecting **Layout > Reset to default layout**.

The following instructions guide you through the process of modeling a progress bar as shown below.

Figure 1. Progress bar

You can also have a look at the progress bar template in the widget template library. See <https://www.elektrobit.com/ebguide/examples/>.

Approximate duration: 10 minutes

## Adding the widgets

The following instructions guide you through the process of adding widgets for the progress bar.

Prerequisite:

- The **Main** state machine contains an Initial state and a View state.
- The Initial state has a transition to the View state.
- The content area displays a View.

### Step 1

In the **Templates** component, click **+** and then select **Container**.

A template is created that contains a **Container**.

### Step 2

Rename the template to `T_ProgressBar`.

### Step 3

Rename the **Container** to `ProgressBar_Container`.

### Step 4

Drag a **Rectangle** into the **Container** and rename it to `Background_Rectangle`.

### Step 5

Drag another **Rectangle** into the **Container** and rename it to `Progress_Rectangle`.

This Rectangle visualizes the progress of the operation.

#### Step 6

Drag a Label into the Container and rename it to `Percentage_Text`.

Entering the properties for the progress bar

The following instructions guide you through the process of configuring the properties and adding scripts to the widgets.

Prerequisite:

- You completed the previous instruction.

#### Step 1

In the **Templates** component, select `ProgressBar_Container`.

#### Step 2

Add the properties `width`, `height`, `x`, `y` to the template interface.

To add a property to the template interface, in the **Properties** component, click the  button next to the property. In the menu, click **Add to template interface**. The icon  is displayed next to the property.

#### Step 3

In the **Properties** component, go to the **User-defined properties** category and click  and select `Integer`.

A user-defined property of type `Integer` is added to the Container.

#### Step 4

Rename the property to `progress`.

#### Step 5

Add `progress` to the template interface.

#### Step 6

In the **Templates** component, select `Background_Rectangle`.

#### Step 7

Link the `width` to the `width` property of `ProgressBar_Container`.

To link a property to another property, in **Properties** component, click the  button next to the property. In the menu, click **Add link to widget property**.

A dialog opens.

#### Step 8

In the dialog, select the `width` property of `ProgressBar_Container` and click **Accept**.

#### Step 9

Link the `height` property of `Background_Rectangle` to the `height` property of `ProgressBar_Container`.

Step 10

In the **Templates** component, select `Progress_Rectangle`.

Step 11

Link the `height` property to the `height` property of `ProgressBar_Container`.

Step 12

Set the `fillColor` to green.

Step 13

Next to the `width` property click  and then select `Convert to script`.

The `width` property defines the width as a percentage of the width of `ProgressBar_Container`.

Step 14

Click `{ }`.

An EB GUIDE Script editor opens.

Step 15

Enter the following EB GUIDE Script in the **Read** section:

```
function()  
{  
  v:this->^.width * v:this->^.progress / 100  
}
```

This script divides the value of the `progress` property by 100.

Step 16

Click **Add available triggers to list**.

Two triggers for `width` and `progress` are added.

Step 17

In the **Templates** component, select `Percentage_Text`.

Step 18

Link the `width` and `height` properties to the `width` and `height` of `ProgressBar_Container`.

Step 19

Set the `horizontalAlign` to `center (1)`.

Step 20

Convert the `text` property into a script.

The text will display the percentage of the width of the container.

Step 21

Click `{ }`.

An EB GUIDE Script editor opens.

Step 22

In the **Read** section, enter the following script:

```
function()
{
  f:int2string(v:this->^.progress) + "%"
}
```

This script converts the percentage value into a string and adds the % character after the percentage number.

#### Step 23

Click **Add available triggers to list**.

The trigger for `progress` is added.

#### Step 24

Set the `x` and `y` properties of all widgets in the template to 0.

#### Step 25

In the **Navigation** component, double-click the View.

#### Step 26

From the **Toolbox** component, drag `T_ProgressBar` into the content area.

The template is added to the View. Now you can add an Animation to it to show the dynamic progress of an operation.

### Animating the progress

The following instructions guide you through the process of animating the progress bar, so that you can see better what happens when you change the percentage value.

Prerequisite:

- You completed the previous instruction.
- The content area displays the View.

#### Step 1

Drag an Animation into the View.

#### Step 2

Rename the Animation to `Loading_Animation`.

#### Step 3

In the **Properties** component, go to the **User-defined properties** category, click **+**, and select `Conditional script`.

#### Step 4

Rename the conditional script to `animateProgress`.

#### Step 5

Next to the conditional script property click `{}`.

An EB GUIDE Script editor opens.

#### Step 6

In the **On trigger** section, enter the following script:

```
function(v:arg0::bool)
{
  f:animation_play(v:this)
  false
}
```

#### Step 7

In the **Navigation** component, double-click `Loading_Animation` to open the **Animation editor**.

#### Step 8

In the **Animation editor**, next to **Animated properties** click **+** and select `View 1`.

The **Animation properties** dialog opens.

#### Step 9

Under `T_ProgressBar 1`, select the `progress` property and then `Linear interpolation curve`.

Click **Accept**.

#### Step 10

In the **Properties** component, set `end` property to `100`.

The progress animation will stop when the progress indicator reaches 100%.

### Saving and testing the EB GUIDE model

Prerequisite:

- You completed the previous instruction.

#### Step 1

To save the project, click  in the command area.

#### Step 2

To start the simulation, click  in the command area.
