Elektrobit and Airbiquity OTA software update solution for the software defined vehicle

An automotive grade over-the-air (OTA) software solution available for millions of intelligent and connected vehicles around the world.

**Pre-integrated onboard & back end over-the-air (OTA) solution**

Elektrobit and Airbiquity® joined forces to enable OEMs to quickly and easily source and build an end-to-end OTA system.

This joint solution combines Elektrobit’s in-vehicle over-the-air update software products with Airbiquity’s multi-ECU OTA platform.

**Benefits**

- Securely & reliably execute OTA updates at scale
- Reduce software-related recall expenses
- Add vehicle features post-production
- Improve vehicle performance
- Speed up platform development and integration
- Establish new monetization programs

**With EB cadian Sync, Elektrobit offers a reliable, flexible, and secure toolchain for software and firmware updates over-the-air:**

- POSIX-based systems including Adaptive AUTOSAR support
- Automotive-grade update/ UCM master and UDS client for software updates OTA
- Connectivity to different back ends

**OTAmatic® securely orchestrates and automates vehicle software update campaigns from the cloud. OTAmatic provides:**

- Sophisticated back end service delivery
- Highly refined vehicle and device targeting
- Discrete policy and privacy controls
- Customizable consumer notifications
- Enhanced multi-layer cybersecurity protection with the Uptane Security Framework
Elektrobit-Airbiquity joint OTA solution

Products
